# Calvin Chen

561-309-9920 | calvinchen521@gmail.com | linkedin.com/in/calvin-chen- | US Citizen

## Education

**University of Washington** — Seattle, WA
*Bachelor of Science in Informatics (Data Science), Minor in Statistics* — *December 2027*

- Coursework: Data Programming, Databases (System, Design, Management), Information Visualization
- Organizations: Applied Analytics UW, DubsTech, NetworkAI

## Skills

**Languages**: Python (pandas, NumPy), SQL (PostgreSQL, MySQL), R
**Data Visualization & BI**: Excel (pivot tables, lookups), Tableau, Power BI, Matplotlib, Seaborn
**Tools & Platforms**: Git, Microsoft Office Suite, Google Workspace
**Concepts**: EDA, ETL/ELT, Data Cleaning, Data Analysis, Data Visualization

## Experience

**Data Analyst Intern** — April 2025 – August 2025
*Beats by Dre* — *Remote*

- Uncovered product gaps in market of high-fidelity wireless speakers, assessing themes across Beats and competitors
- Executed EDA and sentiment analysis on 4,000+ consumer surveys using Excel, Python (pandas, NumPy), NLP
- Ranked 6 key product features and 7 purchase drivers, mapping spend across price tiers and buying channels
- Found sound quality and battery life were top-ranked features, with peak price preference at $100–200
- Drove recommendations for product launch, presenting findings via interactive dashboard for marketing team

**Data Analyst** — December 2024 – May 2025
*Applied Analytics UW* — *Seattle, WA*

- Built models predicting NBA injury recovery times from 6,500+ injury logs to support player return planning
- Cleaned and engineered features with pandas and NumPy, encoding categoricals, standardizing, imputing nulls
- Benchmarked linear, Gradient Boosting, and Random Forest models, tuning hyperparameters to cut MAE by 8%
- Identified and communicated significant injury factors by building 10+ visualizations using matplotlib and seaborn

## Projects

**Spotify Streaming Analysis** | *Python, pandas, PostgreSQL, Power BI*

- Built a Python ETL pipeline to clean and load 227,000+ Spotify streams (2016–2026) from JSON into PostgreSQL
- Wrote SQL queries using CTEs and window functions to rank top artists, top tracks, and compute rolling averages
- Designed Power BI dashboards on listening trends, temporal patterns, replay and completion rates, and devices
- Found weekday listening peaked at 10 PM vs. 7 PM on weekends, with Fri–Sun driving 50% of 2026 total listening

**King County Home Sales Analysis** | *Sheets, Tableau*

- Analyzed 21,000+ King County home sales across 70 zip codes to find housing features most tied to sale price
- Developed a Tableau Prep ETL flow to standardize fields, convert data formats, and remove unused variables
- Built Tableau dashboards with time-series trends and parameterized filters for prospective Seattle Airbnb hosts
- Found living space (r=0.70) and grade (r=0.67) most tied to price, with waterfront homes selling for 3x the median

**Water, Air, Life Expectancy Analysis** | *R*

- Merged and cleaned WHO datasets in R (tidyverse, ggplot2) to relate environmental indicators and life expectancy
- Ranked countries by environmental risk to flag high-risk regions for targeted health interventions

## Additional Experience

**Shift Lead** — August 2024 – Present
*Don't Yell at Me* — *Bellevue, WA*

- Lead store operations across 13-person team, refining procedures and training new employees to improve efficiency
- Serve 450+ items and handle 300+ customer interactions daily, ensuring product consistency and hospitality
